同济大学计算机网络 实验报告

姓名: <u>涂远鹏-1652262</u>

题目:<u>额外加分题</u>

1.首先建立 1652262-990101 目录

```
[root@RHEL/4-SVR 1652262-000103]# cd ..
[root@RHEL74-SVR home]# mkdir 1652262-990101
[root@RHEL74-SVR home]# ]]
总用量 4366132
drwxr-xr-x. 4 root
                                                    26 9月 18 14:06 1652262-00010
                              root
drwxr-xr-x. 5 root
                                                    52 9月
                                                              21 08:07 1652262-00010
                              root
drwxr-xr-x. 4 root
                              root
                                                    26 9月
                                                             18 14:06 1652262-00010
                                                             30 15:17 1652262-99010
drwxr-xr-x. 2 root
                             root
                                                     6 9月
```

2.将之前的 mysql_demo.cpp 复制到该文件夹并编写相应 makefile:

3.从官网上下载 Imysqlclient.a 包,并添加 Imysqlclient.a 的静态编译库并进行编译 (之前已经安装了 stdc++以及 libc 的包),生成了 mysql demo 可执行文件:

名称	,	修改时间	属性
1 上级目录			
libmysqlclient.a	20.37 MB	2017-12-19 15:10:57	-rw-rr
makefile makefile	142	2018-09-30 15:38:20	-rw-rr
mysql_demo mysql_demo	11.24 MB	2018-09-30 17:31:10	-rwxr-xr-x
c++ mysql_demo.cpp	2 KB	2018-09-30 15:22:12	-rw-rr

```
【FOOTORNHEL74-SVR 1652262-990101】# make
g++ mysql_demo.cpp -static -o mysql_demo -I/usr/include/mysql -L. -lmysqlclient -lp
thread -ldl -lm -lcrypt
./libmysqlclient.a(client_plugin.c.o). 在函数 'mysql_load_plugin_v' 中.
/export/home2/pb2/build/sb_1-23948522-1498141788.79/rpm/BUILD/mysql-5.7.19/mysql-5.
7.19/sql-common/client_plugin.c:469: 警告, Using 'dlopen' in statically linked appl
ications requires at runtime the shared libraries from the glibc version used for linking
./libmysqlclient.a(mf_pack.c.o). 在函数 'expand_tilde' 中.
/export/home2/pb2/build/sb_1-23948522-1498141788.79/rpm/BUILD/mysql-5.7.19/mysql-5.
7.19/mysys/mf_pack.c:336: 警告, Using 'getpwnam' in statically linked applications requires at runtime the shared libraries from the glibc version used for linking
./libmysqlclient.a(libmysql.c.o). 在函数 'read_user_name' 中.
/export/home2/pb2/build/sb_1-23948522-1498141788.79/rpm/BUILD/mysql-5.7.19/mysql-5.
7.19/libmysql/libmysql.c:372: 警告, Using 'getpwuid' in statically linked applications requires at runtime the shared libraries from the glibc version used for linking
./libmysqlclient.a(mf_pack.c.o). 在函数 'expand_tilde' 中.
/export/home2/pb2/build/sb_1-23948522-1498141788.79/rpm/BUILD/mysql-5.7.19/mysql-5.
7.19/mysys/mf_pack.c:338: 警告, Using 'endpwent' in statically linked applications requires at runtime the shared libraries from the glibc version used for linking
./libmysqlclient.a(client.c.o). 在函数 'mysql_real_connect' 中.
/export/home2/pb2/build/sb_1-23948522-1498141788.79/rpm/BUILD/mysql-5.7.19/mysql-5.
7.19/sql-common/client.c:4403: 警告, Using 'getaddrinfo' in statically linked applications requires at runtime the shared libraries from the glibc version used for linking
./libmysqlclient.a(libmysql.c.o). 在函数 'mysql_server_init' 中.
/export/home2/pb2/build/sb_1-23948522-1498141788.79/rpm/BUILD/mysql-5.7.19/mysql-5.
7.19/libmysql/libmysql.c:141: 警告, Using 'getservbyname' in statically linked applications requires at runtime the shared libraries from the glibc version used for linking
./libmysqlclient.a(libmysql.c.o)
```

4. 将该可执行文件移植到另外一台 linux 中运行,显示测试结果,结果正确:

```
select return 4 records
